

Comments to the revised version of my master's thesis.

After I asked for the evaluation process of my thesis to be discontinued, I have made the following revisions:

- I have revised the language thoroughly both grammatically and stylewise.
- I have performed statistical analysis where it was possible
- I have touched up the pictures (Figure 20-23)
- I have added missing reagents
- I have added missing software info
- I have redone the picture panel for the flowcytometry result
- I have tried to make my points more clear
- I have updated the list of references
- Finally, I have added thoughts to the discussion.
